Theorem

Suppose that the stage game G_1 has exactly one NE, $(a_1^*, a_2^*, \ldots, a_n^*)$. Then for any $\delta \in (0, 1]$ and any T, the T-times repeated game has a unique SPNE in which all players i play a_i^* at all information sets.

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma

◆□▶ ◆□▶ ◆ □▶ ◆ □▶ ○ □ ○ ○ ○ ○

The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

All past payoffs are sunk

- The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma
- All past payoffs are sunk
- In the last period, the incentives of all players are exactly the same as if the game were being played once

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

- The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma
- All past payoffs are sunk
- In the last period, the incentives of all players are exactly the same as if the game were being played once
- Thus all players must play the stage game Nash equilibrium action regardless of the history of play up to that point

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

- The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma
- All past payoffs are sunk
- In the last period, the incentives of all players are exactly the same as if the game were being played once
- Thus all players must play the stage game Nash equilibrium action regardless of the history of play up to that point

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

But then we can induct

- The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma
- All past payoffs are sunk
- In the last period, the incentives of all players are exactly the same as if the game were being played once
- Thus all players must play the stage game Nash equilibrium action regardless of the history of play up to that point
- But then we can induct
- Knowing that the stage game Nash equilibrium is going to be played tomorrow, at any information set, we can ignore the past payoffs

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

- The basic idea of the proof for this proposition is exactly the same that we saw in the repeated prisoner's dilemma
- All past payoffs are sunk
- In the last period, the incentives of all players are exactly the same as if the game were being played once
- Thus all players must play the stage game Nash equilibrium action regardless of the history of play up to that point
- But then we can induct
- Knowing that the stage game Nash equilibrium is going to be played tomorrow, at any information set, we can ignore the past payoffs
- ► We concentrate just on the payoffs in the future. Thus in period *T* − 1, player *i* simply wants to maximize:

$$\max_{a_i\in A_i}\delta^{T-2}u_i(a_i,a_{-i}^{T-1})+\delta^{T-1}u_i(a^*).$$

▶ What player *i* plays today has no consequences for what happens in period *T* since we saw that all players will play *a** no matter what happens in period *T* − 1

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

- ▶ What player *i* plays today has no consequences for what happens in period *T* since we saw that all players will play *a** no matter what happens in period *T* − 1
- So, the maximization problem above is the same as:

$$\max_{a_i \in A_i} u_i(a_i, a_{-i}^{T-1}).$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

▶ What player *i* plays today has no consequences for what happens in period *T* since we saw that all players will play *a** no matter what happens in period *T* − 1

So, the maximization problem above is the same as:

$$\max_{a_i\in A_i}u_i(a_i,a_{-i}^{T-1}).$$

Thus again, for this to be a Nash equilibrium, we need $a_1^{T-1} = a_1^*, \dots, a_n^{T-1} = a_n^*$.

- ▶ What player *i* plays today has no consequences for what happens in period *T* since we saw that all players will play *a** no matter what happens in period *T* − 1
- So, the maximization problem above is the same as:

$$\max_{a_i\in A_i}u_i(a_i,a_{-i}^{T-1}).$$

- Thus again, for this to be a Nash equilibrium, we need $a_1^{T-1} = a_1^*, \dots, a_n^{T-1} = a_n^*$.
- Following exactly this induction, we can conclude that every player must play a^{*}_i at all times and all histories

Recap from last class

Playing the NE of the stage game in every period is a SPNE in the repeated game

(ロ)、(型)、(E)、(E)、(E)、(O)へ(C)

Playing the NE of the stage game in every period is a SPNE in the repeated game

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

The logic is the same as when there is a single NE

<ロト < 団ト < 三ト < 三ト < 三 ・ つへの</p>

• Always playing (A_1, A_2) is a SPNE

Player 1's strategy is given by:

- 1. Play A_1 in period 1;
- 2. Play A_1 at all histories in period 2.

Player 2's strategy is given by:

- 1. Play A_2 in period 1;
- 2. Play A_2 at all histories in period 2.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

• Always playing (C_1, C_2) is a SPNE

Player 1's strategy is given by:

- 1. Play C_1 in period 1;
- 2. Play C_1 at all histories in period 2.

Player 2's strategy is given by:

- 1. Play C_2 in period 1;
- 2. Play C_2 at all histories in period 2.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

But are there more?

(ロ)、(型)、(E)、(E)、(E)、(O)へ(C)

The logic is the same as before

<ロト < 団ト < 三ト < 三ト < 三 ・ つへの</p>

▶ Playing (A_1, A_2) in t = 1 and (C_1, C_2) in t = 2 is a SPNE

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

Player 1's strategy is given by:

- 1. Play A_1 in period 1;
- 2. Play C_1 at all histories in period 2.

Player 2's strategy is given by:

- 1. Play A_2 in period 1;
- 2. Play C_1 at all histories in period 2.

Similarly, playing (C_1, C_2) in t = 1 and (A_1, A_2) in t = 2 is a SPNE

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 善臣 - のへで

Similarly, playing (C₁, C₂) in t = 1 and (A₁, A₂) in t = 2 is a SPNE

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

Player 1's strategy is given by:

- 1. Play C_1 in period 1;
- 2. Play A_1 at all histories in period 2.

Player 2's strategy is given by:

- 1. Play C_2 in period 1;
- 2. Play A_1 at all histories in period 2.

This is uninteresting since Nash equilibria are played in every period

<ロト < 団ト < 三ト < 三ト < 三 ・ つへの</p>

This is uninteresting since Nash equilibria are played in every period

But are there more?

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past
- What makes a repeated game interesting is when players play strategies in SPNE that condition on what happened in the past

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past
- What makes a repeated game interesting is when players play strategies in SPNE that condition on what happened in the past
- This could not happen when the stage game had a unique NE

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past
- What makes a repeated game interesting is when players play strategies in SPNE that condition on what happened in the past
- This could not happen when the stage game had a unique NE
- In the last period, all players were required to play the unique NE action after all histories!

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past
- What makes a repeated game interesting is when players play strategies in SPNE that condition on what happened in the past
- This could not happen when the stage game had a unique NE
- In the last period, all players were required to play the unique NE action after all histories!

- This is uninteresting since Nash equilibria are played in every period
- But are there more?
- The SPNE that we've considered, players always play strategies that do not condition on what happened in the past
- What makes a repeated game interesting is when players play strategies in SPNE that condition on what happened in the past
- This could not happen when the stage game had a unique NE
- In the last period, all players were required to play the unique NE action after all histories! Why?

To see this, suppose that a history (a₁, a₂) was played in period 1 resulting in payoffs from period 1 of (x, y)

- To see this, suppose that a history (a₁, a₂) was played in period 1 resulting in payoffs from period 1 of (x, y)
- Then the normal form of the subgame starting in period 2 is given by:

	A ₂	<i>B</i> ₂	<i>C</i> ₂
A_1	$(x,y) + \delta(1,1)$	$(x,y)+\delta(0,0)$	$(x,y)+\delta(0,0)$
B_1	$(x,y)+\delta(0,0)$	$(x, y) + \delta(4, 4)$	$(x,y)+\delta(1,5)$
<i>C</i> ₁	$(x,y)+\delta(0,0)$	$(x,y)+\delta(5,1)$	$(x, y) + \delta(3, 3)$

Since we are just adding the same (x, y) to each cell and multiplying by δ, the Nash equilibrium remains unchanged from the original stage game

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬぐ

- Since we are just adding the same (x, y) to each cell and multiplying by δ, the Nash equilibrium remains unchanged from the original stage game
- The set of Nash equilibria of this subgame is given by (A₁, A₂) and (C₁, C₂)

Lets try to find a SPNE in which (B₁, B₂) is played in the first period.

Normal Form

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	1, 1	0,0	0,0
B_1	0,0	4,4	1, 5
<i>C</i> ₁	0,0	5,1	3,3

◆□▶ ◆□▶ ◆ 臣▶ ◆ 臣▶ ○ 臣 ○ の Q @

Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1

Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1

Anna plays the following strategy:

Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Anna plays the following strategy:
 1. Play B₁ in period 1.

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,

3. Play C_1 in period 2 if (B_1, B_2) is played in period 1.

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,

- 3. Play C_1 in period 2 if (B_1, B_2) is played in period 1.
- Bob plays a similar strategy:

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,

- 3. Play C_1 in period 2 if (B_1, B_2) is played in period 1.
- Bob plays a similar strategy:
 - 1. Play B_2 in period 1.

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,
 - 3. Play C_1 in period 2 if (B_1, B_2) is played in period 1.
- Bob plays a similar strategy:
 - 1. Play B_2 in period 1.
 - 2. Play A_2 in period 2 if anything other than (B_1, B_2) is played in period 1,

- Consider the following strategy profile, where we punish in t = 2 if we don't play (B₁, B₂) in t = 1
- Anna plays the following strategy:
 - 1. Play B_1 in period 1.
 - 2. Play A_1 in period 2 if anything other than (B_1, B_2) is played in period 1,
 - 3. Play C_1 in period 2 if (B_1, B_2) is played in period 1.
- Bob plays a similar strategy:
 - 1. Play B_2 in period 1.
 - 2. Play A_2 in period 2 if anything other than (B_1, B_2) is played in period 1,

3. Play C_2 in period 2 if (B_1, B_2) is played in period 1.

If (B_1, B_2) is observed in the first period, the subgame corresponding to that observation admits the following normal form:

Normal Form

	A ₂	<i>B</i> ₂	<i>C</i> ₂
A_1	$(4,4)+\delta(1,1)$	$(4,4) + \delta(0,0)$	$(4,4) + \delta(0,0)$
B_1	$(4,4) + \delta(0,0)$	$(4,4) + \delta(4,4)$	$(4,4) + \delta(1,5)$
<i>C</i> ₁	$(4,4) + \delta(0,0)$	$(4,4) + \delta(5,1)$	$(4,4) + \delta(3,3)$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

The subgame is just the original game with a payoff of (4, 4) added to each box and multiplying by δ

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

- The subgame is just the original game with a payoff of (4, 4) added to each box and multiplying by δ
- If we add the same utility to all boxes, then the preferences of players are completely unchanged

- The subgame is just the original game with a payoff of (4, 4) added to each box and multiplying by δ
- If we add the same utility to all boxes, then the preferences of players are completely unchanged

Therefore the set of Nash equilibria are the same in this subgame as in the stage game

- The subgame is just the original game with a payoff of (4, 4) added to each box and multiplying by δ
- If we add the same utility to all boxes, then the preferences of players are completely unchanged
- Therefore the set of Nash equilibria are the same in this subgame as in the stage game
- So it is a Nash equilibrium in this subgame for players to play (A₁, A₂), which is consistent with the strategy that we proposed

Let us now check that after observing (α₁, α₂) ≠ (B₁, B₂), then it is a Nash equilibrium in the subgame for players to play (C₁, C₂)

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬぐ

Let us now check that after observing (α₁, α₂) ≠ (B₁, B₂), then it is a Nash equilibrium in the subgame for players to play (C₁, C₂)

If (α₁, α₂) ≠ (B₁, B₂) is observed there are some payoffs (x, y) such that the subgame induces the following normal form

	A ₂	B ₂	<i>C</i> ₂
A_1	$(x,y) + \delta(1,1)$	$(x,y)+\delta(0,0)$	$(x,y)+\delta(0,0)$
B_1	$(x,y)+\delta(0,0)$	$(x, y) + \delta(4, 4)$	$(x,y)+\delta(1,5)$
<i>C</i> ₁	$(x,y)+\delta(0,0)$	$(x,y)+\delta(5,1)$	$(x, y) + \delta(3, 3)$

Again in this case, note that we are simply adding the same payoff profile (x, y) to every box and multiplying by δ

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬぐ

Again in this case, note that we are simply adding the same payoff profile (x, y) to every box and multiplying by δ

Therefore, the Nash equilibrium is again the set of Nash equilibrium of the original stage game

Again in this case, note that we are simply adding the same payoff profile (x, y) to every box and multiplying by δ

Therefore, the Nash equilibrium is again the set of Nash equilibrium of the original stage game

In this subgame, it is a Nash equilibrium for players to play (A₁, A₂)

We have checked that the strategy profile was indeed a Nash equilibrium in all subgames that begin in period 2

We have checked that the strategy profile was indeed a Nash equilibrium in all subgames that begin in period 2

(ロ)、(型)、(E)、(E)、 E) の(()

The only other subgame is the whole game itself

We have checked that the strategy profile was indeed a Nash equilibrium in all subgames that begin in period 2

- The only other subgame is the whole game itself
- We need to check that indeed the strategies constitute a Nash equilibrium in the whole game

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

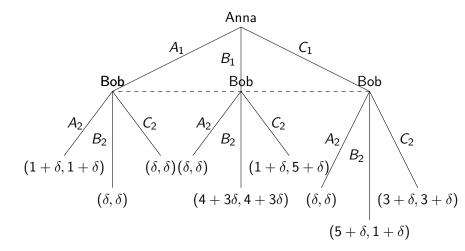

We have checked that the strategy profile was indeed a Nash equilibrium in all subgames that begin in period 2

The only other subgame is the whole game itself

We need to check that indeed the strategies constitute a Nash equilibrium in the whole game

To do this, we already specified the play at all information sets in the second period

So we can simplify the game which gives the following game tree.

▲□▶▲□▶▲≡▶▲≡▶ ≡ のQ⊙

The normal form of this game (conditional on what happens in T = 2) is:

Normal Form

	A ₂	<i>B</i> ₂	<i>C</i> ₂

- What is the take away of this exercise?
- In the repeated Prisoner's Dilemma, the stage game (played just once) had just one Nash equilibrium
- The only subgame perfect Nash equilibrium was to play the Nash equilibrium of the stage game in every period
- In fact, one can prove generally that if the stage game has only one Nash equilibrium then in the repeated game with that stage game, the unique subgame perfect Nash equilibrium requires the Nash equilibrium to be played in all periods and all information sets
- In contrast, in this game, we saw that there was a subgame perfect Nash equilibrium in which an action profile (B₁, B₂) that was **not** a Nash equilibrium of the stage game was played in period 1
- This was because there were multiple Nash equilibria of the stage game that could be used as prize/punishment for certain behaviors

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	1,1	0,0	0,0
<i>B</i> ₁	0,0	4,4	1, 5
<i>C</i> ₁	0,0	5, 1	3,3

Normal Form

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	1,1	0,0	0,0
B_1	0,0	4,4	1, 5
<i>C</i> ₁	0,0	5, 1	3,3

Normal Form

Suppose that the players were to play (A₁, B₂) in the first period

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	1,1	0,0	0,0
B_1	0,0	4,4	1, 5
<i>C</i> ₁	0,0	5, 1	3,3

Normal Form

- Suppose that the players were to play (A₁, B₂) in the first period
- Can this occur? The answer is no

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	1,1	0,0	0,0
B_1	0,0	4,4	1, 5
<i>C</i> ₁	0,0	5, 1	3,3

Normal Form

- Suppose that the players were to play (A₁, B₂) in the first period
- Can this occur? The answer is no
- Remember either (A₁, A₂) or (C₁, C₂) must be played in any pure strategy SPNE after a history

Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE

Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE

Suppose otherwise

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.
- The maximum payoff that player 1 could get from playing according to this "supposed" SPNE:

 $u_1(A_1, B_2) + \delta u_1(C_1, C_2) = 3\delta$

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.
- The maximum payoff that player 1 could get from playing according to this "supposed" SPNE:

$$u_1(A_1, B_2) + \delta u_1(C_1, C_2) = 3\delta$$

Now suppose that player 1 deviates to C₁ instead of playing A₁

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.
- The maximum payoff that player 1 could get from playing according to this "supposed" SPNE:

$$u_1(A_1, B_2) + \delta u_1(C_1, C_2) = 3\delta$$

- Now suppose that player 1 deviates to C₁ instead of playing A₁
- The worst the payoff that he could get in any SPNE:

$$u_1(C_1, B_2) + \delta u_1(A_1, A_2) = 5 + \delta$$

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.
- The maximum payoff that player 1 could get from playing according to this "supposed" SPNE:

$$u_1(A_1, B_2) + \delta u_1(C_1, C_2) = 3\delta$$

- Now suppose that player 1 deviates to C₁ instead of playing A₁
- The worst the payoff that he could get in any SPNE:

$$u_1(C_1, B_2) + \delta u_1(A_1, A_2) = 5 + \delta$$

• 5 + δ is always greater than 3δ

- Now let us argue that (A₁, B₂) cannot be played in period 1 in a SPNE
- Suppose otherwise
- No matter what happens in the second period, there is no way A₁ could be a best response against B₂ in the first period.
- The maximum payoff that player 1 could get from playing according to this "supposed" SPNE:

$$u_1(A_1, B_2) + \delta u_1(C_1, C_2) = 3\delta$$

- Now suppose that player 1 deviates to C₁ instead of playing A₁
- ▶ The worst the payoff that he could get in any SPNE:

$$u_1(C_1, B_2) + \delta u_1(A_1, A_2) = 5 + \delta$$

- $5 + \delta$ is always greater than 3δ
- By playing C₁ against B₂, player 1 can guarantee a higher payoff

• Can there be a SPNE in which (A_1, C_2) is played in period 1?

• Can there be a SPNE in which (A_1, C_2) is played in period 1?

The answer is no for the same reason

- Can there be a SPNE in which (A_1, C_2) is played in period 1?
- The answer is no for the same reason
- By playing A₁ against C₂, the best that player 1 can hope for in a SPNE is:

$$u_1(A_1, C_2) + \delta u_1(C_1, C_2) = 3\delta$$

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬぐ

• $3 + \delta$ is always greater than 3δ

Thus, there are incentives to deviate

Symmetrically there cannot be any SPNE in which (B₁, A₂) and (C₁, A₂) are played in period 1

Symmetrically there cannot be any SPNE in which (B₁, A₂) and (C₁, A₂) are played in period 1

▶ We already know that (A₁, A₂), (B₁, B₂), (C₁, C₂) can be played in a SPNE in period 1

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Symmetrically there cannot be any SPNE in which (B₁, A₂) and (C₁, A₂) are played in period 1

▶ We already know that (A₁, A₂), (B₁, B₂), (C₁, C₂) can be played in a SPNE in period 1

The remaining question is whether (C₁, B₂) can be played in period 1

・ロト ・ 目 ・ ・ ヨト ・ ヨ ・ うへつ

Consider the following strategy profile

Player 1's strategy is:

- 1. Play C_1 in period 1
- 2. Play A_1 in period 2 if the first period action profile was (C_1, C_2)
- 3. Play C_1 in period 2 if the first period action profile was anything other than (C_1, C_2)

Player 2's strategy is:

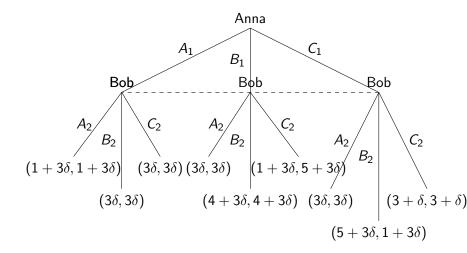

- 1. Play B_2 in period 1
- 2. Play A_2 in period 2 if the first period action profile was (C_1, C_2)
- 3. Play C_2 in period 2 if the first period action profile was anything other than (C_1, C_2)

We know that the strategy is a NE in the subgames that start in t = 2

We know that the strategy is a NE in the subgames that start in t = 2

So we can simplify the game which gives the following game tree.

▲□▶▲□▶▲目▶▲目▶ 目 のへの

The normal form of this game (conditional on what happens in T = 2) is:

Normal Form

	A ₂	<i>B</i> ₂	<i>C</i> ₂
A_1	$1+3\delta,1+3\delta$	$3\delta, 3\delta$	$3\delta, 3\delta$

An equilibrium outcome of this game is to play (C₁, B₂) in period 1 and (C₁, C₂) in period 2 if δ = 1 There are other SPNE that results in the same equilibrium outcome

For example consider the following SPNE

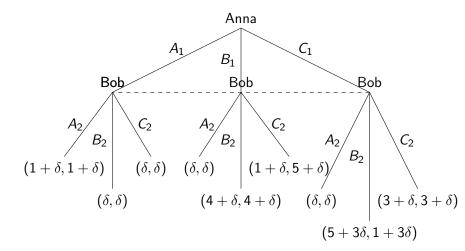

- Player 1's strategy is:
 - 1. Play C_1 in period 1.
 - 2. Play A_1 in period 2 if the first period action profile was anything other than (C_1, B_2) .
 - 3. Play C_1 in period 2 if the first period action profile was (C_1, B_2) .
 - 1. Player 2's strategy is:
 - 2. Play B_2 in period 1.
 - 3. Play A_2 in period 2 if the first period action profile was anything other than (C_1, B_2) .
 - 4. Play C_2 in period 2 if the first period action profile was (C_1, B_2) .

We know that the strategy is a NE in the subgames that start in t = 2

We know that the strategy is a NE in the subgames that start in t = 2

So we can simplify the game which gives the following game tree.

▲□▶▲□▶▲目▶▲目▶ 目 のへの

The normal form of this game (conditional on what happens in T = 2) is:

Normal Form

	A ₂	<i>B</i> ₂	<i>C</i> ₂
A_1	$1+\delta,1+\delta$	$3\delta,\delta$	δ, δ
B_1	δ, δ	$4 + \delta, 4 + \delta$	$1+\delta,5+\delta$
<i>C</i> ₁	δ, δ	$5+3\delta,1+3\delta$	$3 + \delta, 3 + \delta$

(ロ)、(型)、(E)、(E)、 E) の(()

- The set of pure strategy SPNE can involve the play of non-stage game NE action profiles in period 1 (although in period 2, players must play stage game NE)
- We've already seen that there may be multiple SPNE that lead to the same equilibrium outcomes
- Thus, characterizing all pure strategy SPNE is extremely tedious

- There are many many pure strategy SPNE of this game!
- The set of pure strategy SPNE can involve the play of non-stage game NE action profiles in period 1 (although in period 2, players must play stage game NE)
- We've already seen that there may be multiple SPNE that lead to the same equilibrium outcomes
- Thus, characterizing all pure strategy SPNE is extremely tedious
- So instead of calculating all possible SPNE, lets just calculate the set of all possible equilibrium outcomes

1. $(A_1, A_2), (A_1, A_2)$

1. $(A_1, A_2), (A_1, A_2)$ 2. $(A_1, A_2), (C_1, C_2)$

Example 1

Example 2

Lecture 18: Repeated Games

Recap from last class

More than one NE in the stage game

Example 1

Example 2

▲□▶▲圖▶★≣▶★≣▶ ≣ の�?

Consider the following repeated game and $\delta=1$

Stage Game

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	(10, 10)	(-1, 11)	(-1, 11)
B_1	(11, -1)	(3,1)	(0,0)
<i>C</i> ₁	(11, -1)	(0,0)	(1,3)

• The above game has two Nash equilibria (B_1, B_2) and (C_1, C_2)

• The above game has two Nash equilibria (B_1, B_2) and (C_1, C_2)

Even though there are multiple Nash equilibria, there are no subgame perfect equilibria in which (A₁, A₂) is played in period 1

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬぐ

• The above game has two Nash equilibria (B_1, B_2) and (C_1, C_2)

Even though there are multiple Nash equilibria, there are no subgame perfect equilibria in which (A₁, A₂) is played in period 1

Either (B₁, B₂) or (C₁, C₂) must be played after the history (A₁, A₂) in period 1 since in the last period, always one of the stage game Nash equilibria must be played.

Suppose that (B₁, B₂) is played in period 2 after (A₁, A₂) in period 1

Suppose that (B₁, B₂) is played in period 2 after (A₁, A₂) in period 1

Player 2 obtains a payoff of

 $10 + \delta$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 ○のへ⊙

Suppose that (B₁, B₂) is played in period 2 after (A₁, A₂) in period 1

Player 2 obtains a payoff of

 $10 + \delta$

• By deviating to B_2 in period 1, player 2 obtains at least:

 $11 + \delta$

since in period 2 either (B_1, B_2) or (C_1, C_2) will be played in any SPNE

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

Suppose that (B₁, B₂) is played in period 2 after (A₁, A₂) in period 1

Player 2 obtains a payoff of

 $10 + \delta$

• By deviating to B_2 in period 1, player 2 obtains at least:

 $11 + \delta$

since in period 2 either (B_1, B_2) or (C_1, C_2) will be played in any SPNE

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Thus there are incentives to deviate

Suppose instead that (C₁, C₂) is played in period 2 after (A₁, A₂) in period 1

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Suppose instead that (C₁, C₂) is played in period 2 after (A₁, A₂) in period 1

player 1 obtains a payoff of

 $10 + \delta$

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

Suppose instead that (C₁, C₂) is played in period 2 after (A₁, A₂) in period 1

player 1 obtains a payoff of

 $10 + \delta$

▶ By deviating to B_1 in period 1, player 1 obtains at least $11 + \delta$

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

Suppose instead that (C₁, C₂) is played in period 2 after (A₁, A₂) in period 1

player 1 obtains a payoff of

 $10 + \delta$

• By deviating to B_1 in period 1, player 1 obtains at least $11 + \delta$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Thus there are incentives to deviate

Even though there are multiple NE in the stage game, it may still be impossible to achieve Pareto efficient action profiles in period 1

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Even though there are multiple NE in the stage game, it may still be impossible to achieve Pareto efficient action profiles in period 1

The key to this example was that players disagreed on which stage game NE is better

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

Even though there are multiple NE in the stage game, it may still be impossible to achieve Pareto efficient action profiles in period 1

The key to this example was that players disagreed on which stage game NE is better

Thus, at least one person always had an incentive to deviate away from (A₁, A₂) in period 1

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Lecture 18: Repeated Games

More than one NE in the stage game

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Example 1

Example 2

Lecture 18: Repeated Games

Recap from last class

More than one NE in the stage game

Example 1

Example 2

Even if there is disagreement about which stage game NE is better between the two players, we can still obtain examples of outcomes that are not Nash equilibrium in the first period

▲□▶▲□▶▲≡▶▲≡▶ ≡ めぬる

- Even if there is disagreement about which stage game NE is better between the two players, we can still obtain examples of outcomes that are not Nash equilibrium in the first period
- Consider for example the following stage game and suppose we consider a twice repeated game with discount factor $\delta > \frac{1}{2}$

	A_2	B ₂	<i>C</i> ₂	
A_1	(10, 10)	(0,9)	(0,9)	
B_1	(11, -1)	(3, 1)	(0,0)	
C1	(11 - 2)	(0, 0)	$(1 \ 3)$	

Stage Game

• The NE of the stage game are (B_1, B_2) and (C_1, C_2)

• The NE of the stage game are (B_1, B_2) and (C_1, C_2)

▶ In this repeated game, is there a subgame perfect Nash equilibrium in which (*A*₁, *A*₂) is played in period 1?

・ロト ・ 目 ・ ・ ヨト ・ ヨ ・ うへつ

• The NE of the stage game are (B_1, B_2) and (C_1, C_2)

▶ In this repeated game, is there a subgame perfect Nash equilibrium in which (*A*₁, *A*₂) is played in period 1?

・ロト ・ 目 ・ ・ ヨト ・ ヨ ・ うへつ

The answer is yes

Consider the following strategy profile

Player 1 plays the following strategy:

- 1. A_1 in period 1;
- 2. B_1 in period 2 if (A_1, A_2) was played in period 1;
- 3. C_1 in period 2 if (A_1, A_2) was not played in period 1.

Player 2 plays the following strategy:

- 1. A_2 in period 1;
- 2. B_2 in period 2 if (A_1, A_2) was played in period 1;
- 3. C_2 in period 2 if (A_1, A_2) was not played in period 1.

► Is the above an SPNE?

- If he follows: $u_1 = 10 + 3\delta$
- If he defects: $u_1 = 11 + \delta$
- Follows if $\delta \geq \frac{1}{2}$

Player 2:

• If he follows: $u_2 = 10 + X\delta$

• If he defects:
$$u_2 = 9 + X\delta$$

Stage Game

	A_2	<i>B</i> ₂	<i>C</i> ₂
A_1	(10, 10)	(0,9)	(0,9)
B_1	(11, -1)	(3,1)	(0,0)
<i>C</i> ₁	(11, -2)	(0,0)	(1,3)

► Player 1:

• If he follows: $u_1 = 10 + 3\delta$

• If he defects: $u_1 = 11 + \delta$

Follows if $\delta \geq \frac{1}{2}$

Player 2:

- If he follows: $u_2 = 10 + X\delta$
- If he defects: $u_2 = 9 + X\delta$
